

# AP Physics C Summer Work

## Welcome to AP Physics C!

For your summer work, you will be completing an EdX course that will be useful for us in the coming year. Don't stress over this! It will just help us if we can do some review/preview, and your EdX course has online discussions available. I will also be available (by email or by providing you with videos). We will of course be able to discuss this live when school starts at Maryvale.

You will need complete the **free** "[On-Ramp to AP Physics C: Mechanics](#)" EdX online class. This EdX class is a self-paced course with an end date of Sept. 12, although you will need to **complete it by our first class at Maryvale**. Please submit a screenshot of "grading chart" from your progress page to [Google Classroom](#), and it will count as a homework grade. You do not need to pay for a certificate—just use the free option!

This Ed X course does not require calculus, only algebra, trig, and vectors. However, it does use a lot of deep analytical thinking. This course was written by a senior AP Physics teacher who has been a Reader (grader for the exam) for many years and actively teaches College Board training courses for other AP teachers. Once we're in class in the fall, we can discuss questions on the material, and I will check on your understanding.
